

Cobius Audit Manager™

The complete software solution for managing RAC audits

Cobius' Audit Manager is the answer that hospitals facing audits by Medicare's Recovery Audit Contractors have been waiting for. It enables hospitals to respond quickly to audit requests and then seamlessly manage those audits through to resolution, while supporting continuous quality improvement.

The Challenges of RAC Audits

At any given time, a hospital can have hundreds – even thousands – of accounts in various stages of audit and appeal. The RAC process poses several critical challenges on healthcare providers.

- **Meeting strict deadlines** or risk foregoing challenges to RAC decisions.
- **Monitoring workloads and deadlines** for 100s or 1000s of cases – without adding staff -- presents logistical challenges
- **Collaborating efficiently** with internal staff and outside consultants to review and appeal decisions
- **Understanding RAC decisions** to prevent repeat claims.
- **Avoiding 'free' or 'spreadsheet-like' solutions** that often end up requiring extensive resources to maintain them.

The Audit Manager Difference

Audit Manager helps you keep on top of every RAC Audit. Combining our experience in auditing with the experiences of RAC participants, we built best practices into Audit Manager to help you minimize your RAC costs and risks.

- **Save Labor.** Audit Manager's built-in workflow and automatic data capture minimize the effort needed to manage audits, so you don't need to hire additional staff. Optional integration with your ADT, EMR and other programs help you work even more efficiently
- **Don't Miss a Deadline.** Audit Manager contains many features, such as work lists and email reminders that ensure you meet deadlines.
- **Collaborate Effectively on Appeals.** Audit Manager lets you keep documentation online where all authorized users – inside and outside of your facility -- can access it quickly and securely. Information is immediately available for release. (Even if you have an EMR, Audit Manager makes sure everyone sees the same documents.) Appeal templates other tools further make appeals faster and easier.

- **Get Critical Information Instantly.** Audit Manager's dynamic, real-time reports and Executive Scorecard give instant status updates to senior management and others, so you can assess your status and risks at any time.
- **Detect and Prevent Error Patterns.** With its powerful reporting features, Audit Manager gives you the ability to analyze audits for patterns and avoid repeating costly mistakes.
- **No Catch.** We don't require you to buy additional services from us, like consulting or other software. Thus, you're free to organize your RAC response and use your existing systems in a way that is most efficient for you

The Bottom Line

The bottom line for us is your bottom line. Audit Manager helps make sure you can easily manage all your audits with minimal effort and respond to RAC decisions quickly and effectively to

- Meet deadlines
- Minimize workload and avoid hiring additional personnel
- Reduce the chances of future repeat mistakes
- Get you **the** information you need immediately
